

Smart City:

- Traffic Management
- Waste Management Systems
- Water Monitoring and Control
- Smart Street Lighting

Commercial:

- Automated Power Management
- Smart Lighting
- Smart Digital Signage
- Integrated Surveillance Systems
- Interactive Access Control

Residential:

- IP 4K Video Distribution
- Smart Energy Meters
- Smart AC and Heating
- IP Multi-zone Audio
- Lighting and Shading Systems
- Home Security and Geo-fencing

Yacht:

- Hidden Motorized TV Systems
- Monitored Cloud Services
- Marine Audio
- Marine Communication

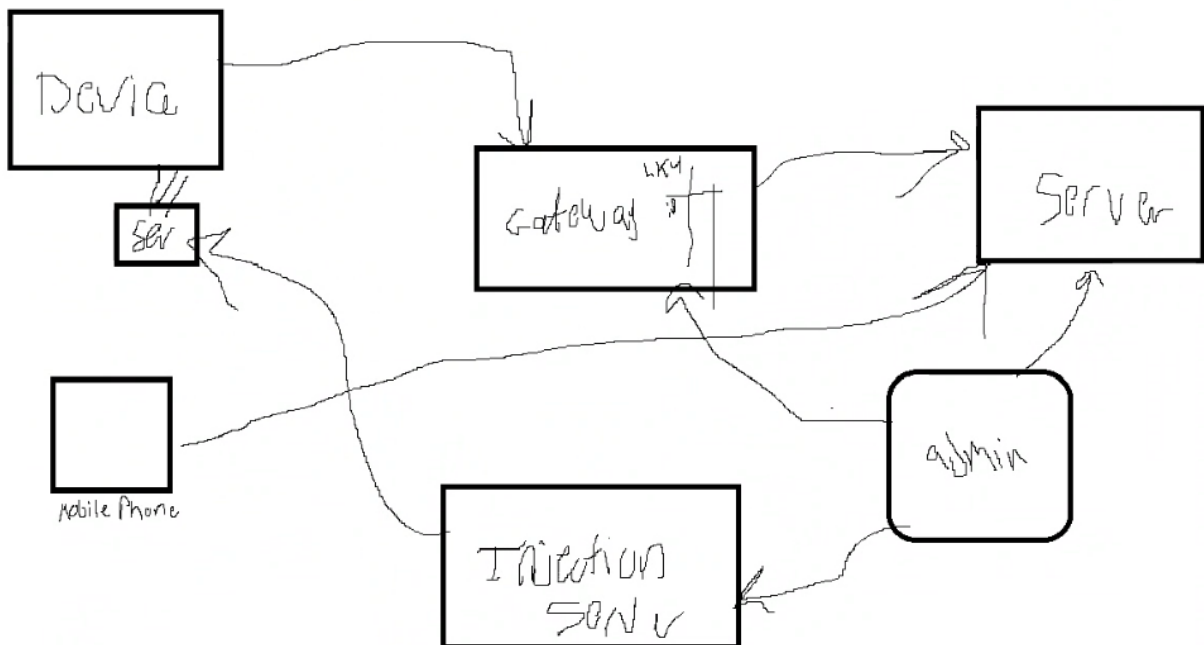

Other:

- Guest Room Management
- Digitized Nursing Systems
- Lighting Management Systems
- Automated Pro Audio

Our System:

- E-commerce with a digital twin before implementation
 - AR scan of residential property (AI)
 - Turn blueprint of property (pdf, jpg, or png) into 3d models having layers for each floor (AI) and save it
 - 2D view and option to look and move through rooms in 3D

- Lightmaps and Heatmaps (Physical properties) (AI)
- interaction through tablets, phone app inside simulation model with the same interface as the real model
- AI chat-bot and chat with admins options
- Billing system for deposit and maintenance fees
- Optional VR to view the the prototypes (digital twins)
 1. VR set (like meta)
 2. VR box and controller
- Connection with digital twin after implementation (With subscription)
 - Makes it easy to debug, issue ticketing system (Side note: smart home processor sends updates to servers with message brokers that are saved in database and engineers can view the state of the home and optionally using tunneling make a gateway to inject new code into the smart home processor)

- An alternative to the mobile app
- Version tracking
